

Gear Driven Performance hosts seminar on cam selection and understanding engines

BY DIANNA ANDERSON
Gear Driven Performance of Mauston held their second seminar January 10. The topics were cam selection and understanding engines.

Eric Arneson, service manager, presented his second seminar on motorcycle performance and understanding how you ride. Understanding how the

engine works and how air-flow and fuel impact the engine was the focus of this seminar. This was a more advanced seminar about the inner working of different

cam sizes versus the air flow and where power should be coming from when riding a street bike.

"There are times when bigger is not always better, and just changing your cams can improve performance," said Arneson.

With the economy in recession, at this time you may be better served to take a look at improving the performance of your older bikes, Arneson said.

The next seminar will be February 21 at noon. The topic will be "Get Ready to Ride."

Many of the 43 attendees thought the information was priceless. The seminars are designed to help customers make the right decisions about what they want from their motorcycles.

Gear Driven can service ATV's, snowmobiles, metric cruisers, sport bikes and V-twin motorcycles. For service, call 608-847-6400, or stop in at N3843 State Road. 58 in Mauston. Hours are Tuesday through Friday, 9 a.m. to 6 p.m., and Saturday, 8 a.m. to 2 p.m.

Eric Arneson, service manager of Gear Driven Performance in Mauston, led the seminar last Saturday and explained different cams to the students.

Forty-three people attended the recent seminar at Gear Driven Performance which focused on how motorcycle engines work.
